

Employees are working in a company and if any of the employee resign their job then assigned work is not finished immediately and delivery of project to client will get delayed. Company wants to know which employee resign in this month or next. If they know previously they can arrange alternative to avoid such problem. As a AI engineer you must give solution to this

- 1) How will you achieve this in AI
Based on Employee info and Project risk Factor and Employees trend on resignation
- 2) Find out the 3-stage of problem identification
Machine Learning
Supervised
Classification
- 3) Name the Project: Employee Resignation Prediction
- 4) Create Dummy Dataset
EmployeeID|EmployeeName|Project|High Risk Project|Emp Experience|Emp Overtime trend|Promotion gap|Resigned
